

Emergency Policy

An emergency is any situation that is, or could potentially be, a threat to the safety of people, property or the environment.

The objectives of Bridgeport Energy's Emergency policy are to prevent or minimise:

- injury to persons;
- property loss or damage;
- production loss; and
- detrimental impact upon the environment and wildlife.

These objectives shall be achieved by establishment and maintenance of a capability to quickly identify and professionally respond to any accident, incident or hazardous situation.

Bridgeport Energy is committed to ensuring the components of prevention, preparedness, response and recovery are exercised and addressed at all times in order to achieve the aforementioned objectives.
